

Aeternum

The Future of Esports Engagement

A blockchain-powered esports exchange on Solana that transforms fan participation through tokenized team assets and prediction markets

The Problem: Esports Fan Engagement Gap

Current esports fans are spectators, not participants

Limited Financial Participation

Fans invest time and emotion but have no economic stake in team success

Zero Ownership Experience

No tangible connection to favorite teams beyond merchandise and tickets

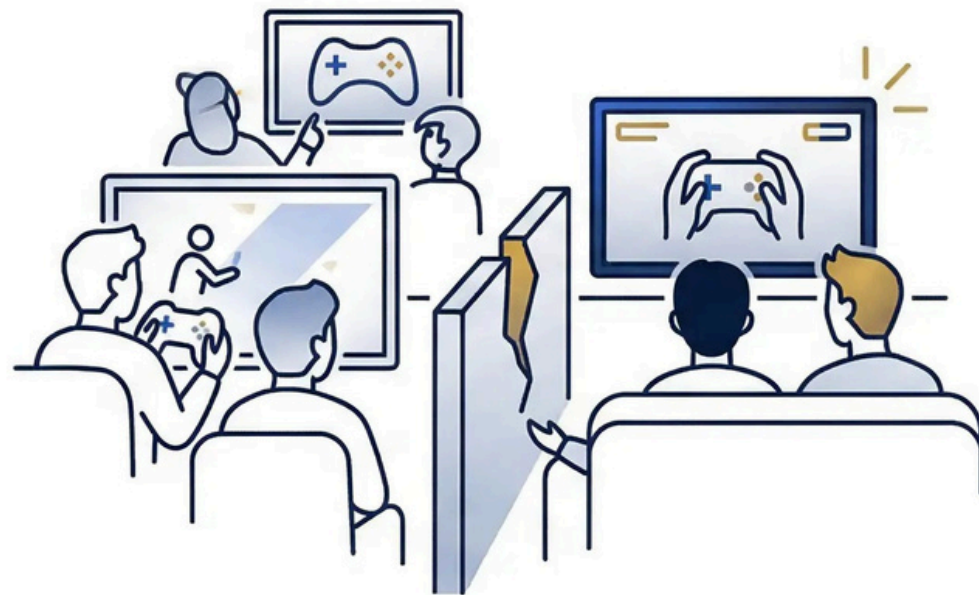

Lack of Transparency

Opaque team finances and performance metrics limit informed engagement

Passive Consumption Model

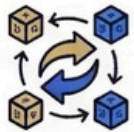

Fans consume content but cannot influence or benefit from team outcomes

**Result: \$1.8B esports market
with untapped fan potential**

The Solution: Decentralized Esports Markets

Introducing a Solana-based platform with five core capabilities designed to bridge the engagement gap through decentralization and transparency

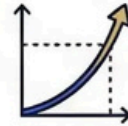

Real-Time Asset Trading

Instant buy/sell of tokenized team assets with transparent pricing

Prediction Market Engine

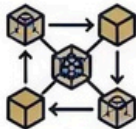

Community-driven forecasting with automated settlement

Bonding Curve Economics

Dynamic pricing that reflects true market demand

Built on Solana for speed, scalability, and low transaction costs

Cross-Chain Compatibility

Seamless integration across multiple gaming ecosystems

Transparent Governance

Community-controlled platform evolution and decision-making

Core Components

Three pillars powering the Aeternum exchange

Tokenized Team Assets (NFTs)

Unique digital collectibles representing team ownership shares with real utility and trading value

Prediction Markets

Decentralized betting pools where fans stake tokens on match outcomes and team performance

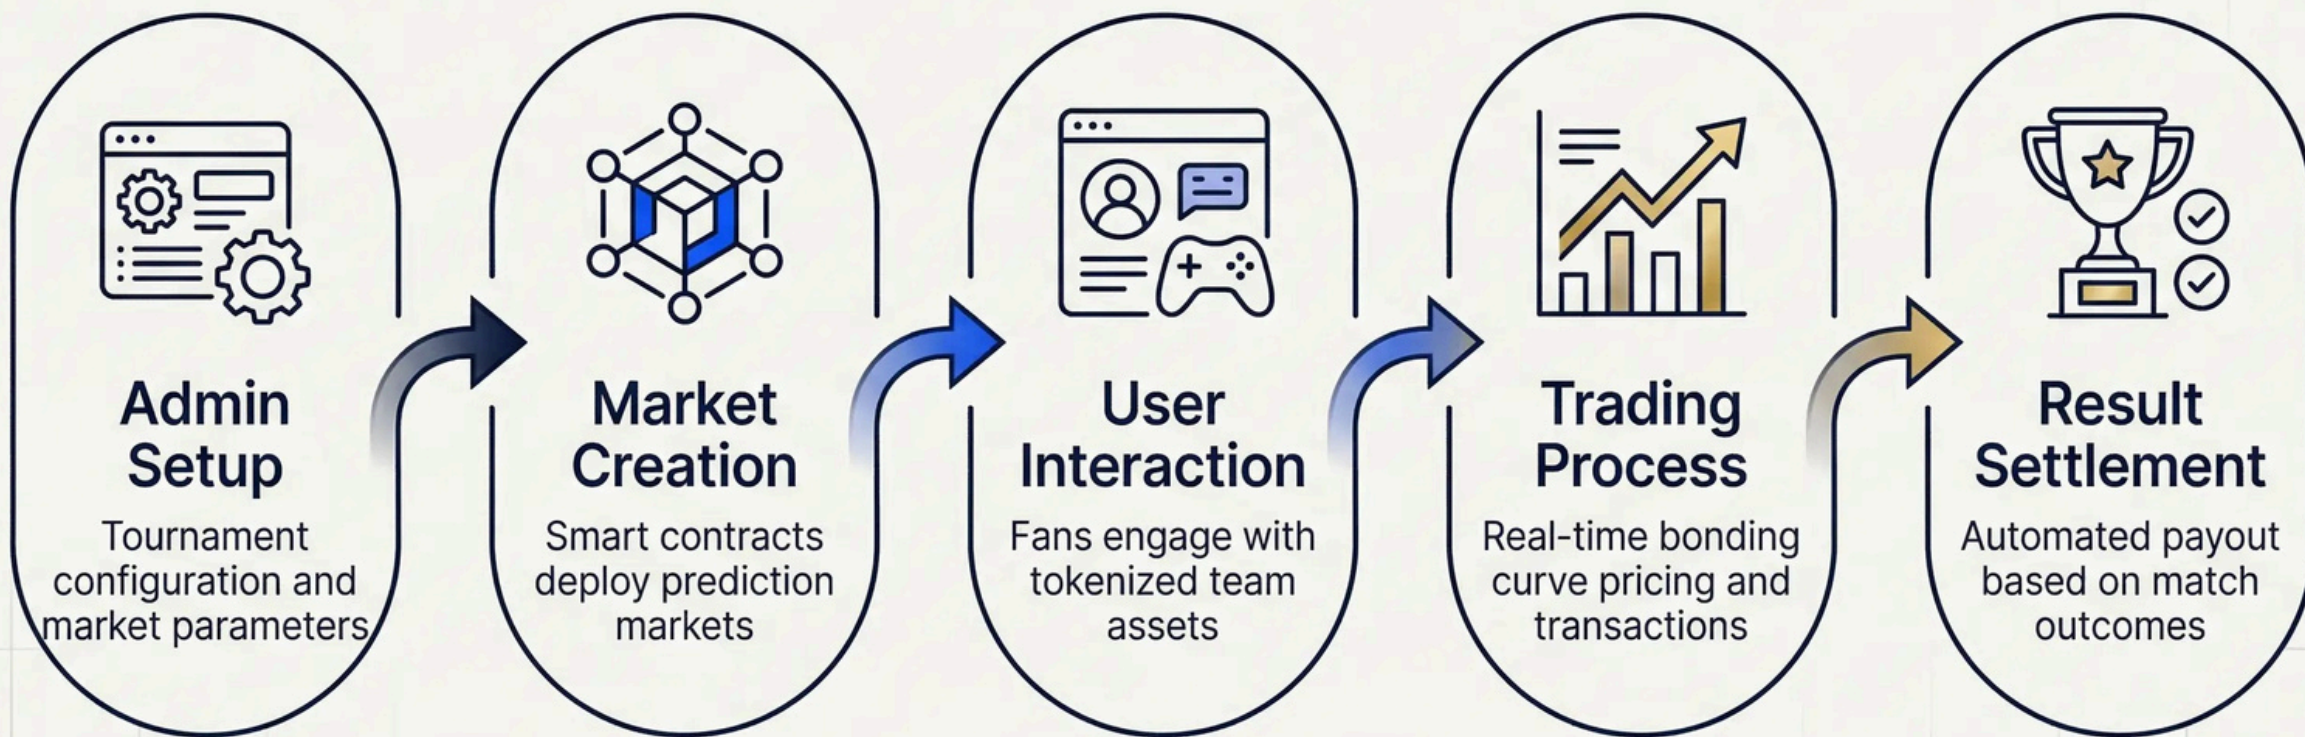

Bonding Curve Pricing

Automated pricing mechanism that adjusts token values based on supply, demand, and market activity

How It Works: Product Demo Flow

A seamless five-step journey from setup to settlement

Technical Architecture

Built for Scale, Security & Performance

Frontend Layer

React Native

Cross-platform mobile app

Backend Layer

Node.js

API server & business logic

Blockchain Layer

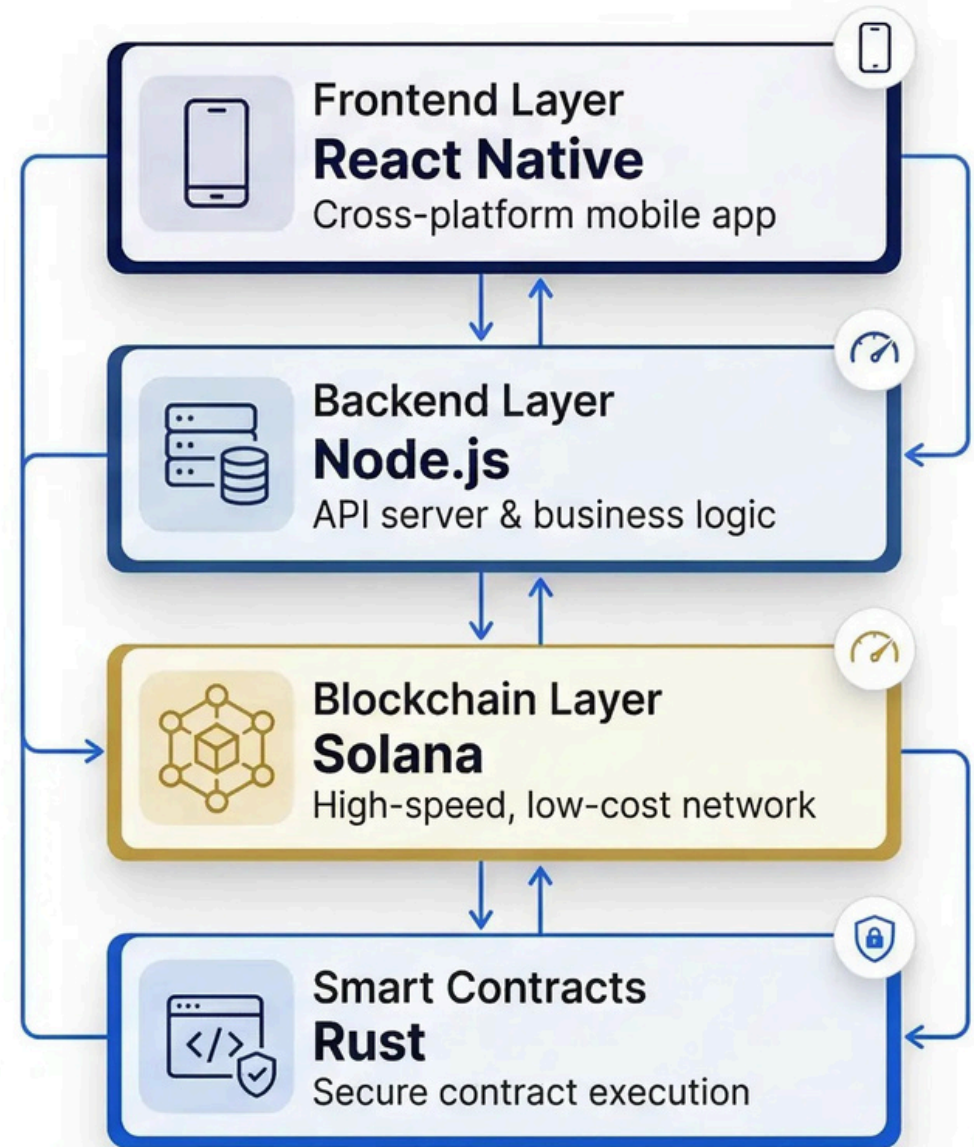

Solana

High-speed, low-cost network

Smart Contracts

Rust

Secure contract execution

Technical Highlights

Built for Scale, Security, and Transparency

Pricing Engine

Dynamic Pricing Engine

Bonding curve algorithms automatically adjust asset prices based on supply, demand, and market sentiment in real-time

Fee Model

Transparent Fee Structure

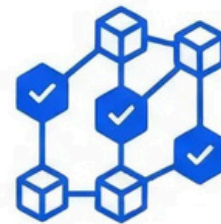

Low transaction fees with clear breakdown: 2.5% platform fee, 0.5% Solana network fee, zero hidden charges

Risk Controls

Multi-Layer Risk Controls

Automated position limits, market maker protections, and smart contract audits ensure secure trading environment

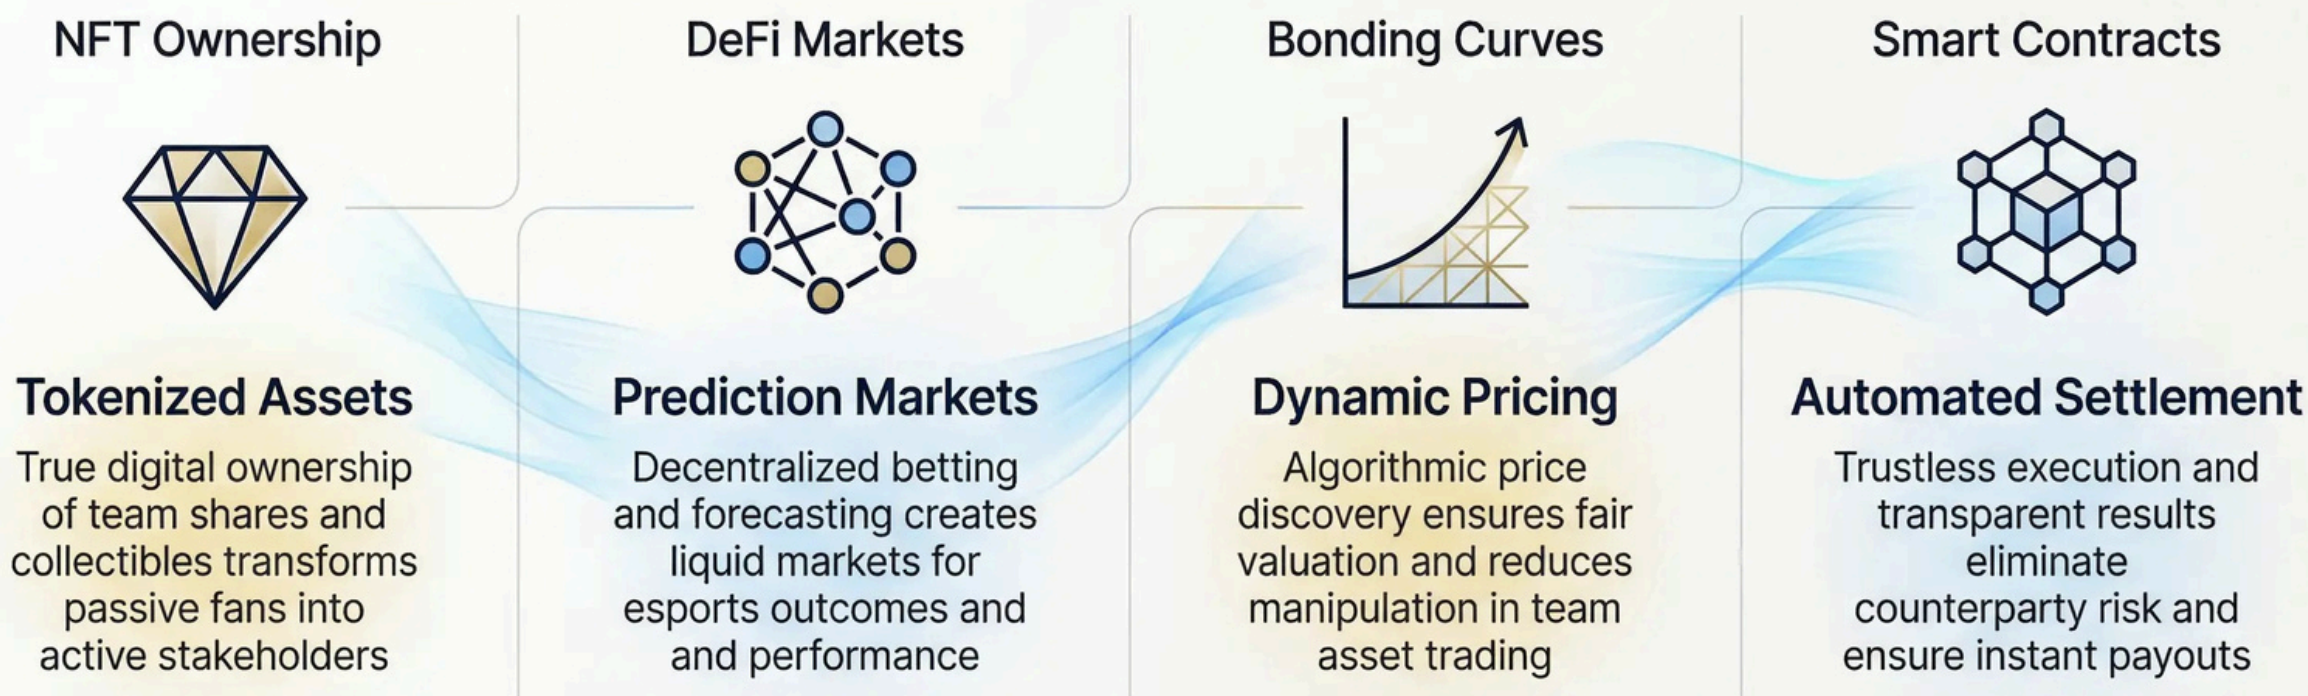

Transparency Layer

Full Audit Transparency

Every transaction recorded on-chain with public verification, real-time market data, and comprehensive trade history

Innovation: Transforming Participation

Four Web3 Primitives Creating a New Esports Paradigm

= Passive Viewers → Active Participants → Digital Asset Owners

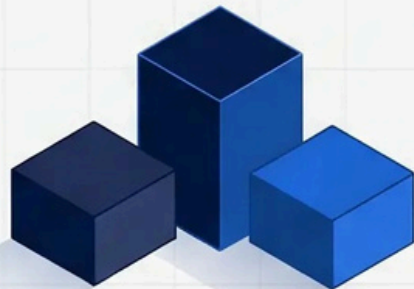

Current MVP vs Future Vision

MVP Foundation

NOW

Live on Solana Testnet

- Basic tokenized team assets creation
- Simple prediction market interface
- Core bonding curve pricing mechanism
- Wallet connection and user authentication
- Basic trading functionality

Future Platform

ROADMAP

Full Production Roadmap

- Advanced NFT marketplace with rarity mechanics
- Multi-game prediction markets across major esports
- Dynamic pricing with AI-powered market making
- Social features and community governance
- Cross-chain interoperability and mobile app
- Professional tournament integration
- Institutional trading tools

Business Model

Sustainable Revenue & Strategic Growth

Revenue Streams

Transaction Fees

Commission on all prediction market trades and team asset transactions

Premium Features

Subscription tiers for advanced analytics, exclusive markets, and priority access

Partnership Revenue

Revenue sharing with esports teams, tournaments, and gaming platforms

Growth Opportunities

Multi-Chain Expansion

Deploy on Ethereum, Polygon, and other major blockchains for broader reach

Traditional Sports

Expand prediction markets to NFL, NBA, soccer, and other major sports leagues

White-Label Solutions

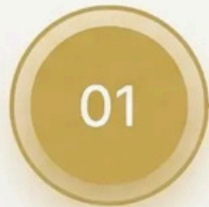

License technology to gaming companies and sports organizations

Post-Hackathon Roadmap

Clear milestones toward a fully decentralized esports ecosystem

SHORT TERM

Foundation

- Launch core prediction markets
- Integrate first 3 major esports titles
- Deploy tokenized team assets
- Build initial user community (1K+ users)

MEDIUM TERM

Expansion

- Cross-chain integration beyond Solana
- Advanced analytics dashboard
- Mobile app launch (iOS/Android)
- Partnership with tier-1 esports organizations

LONG TERM

Ecosystem

- Fully decentralized governance (DAO)
- Global tournament integration
- AI-powered market predictions
- Multi-million user ecosystem

The 30-Second Impact

“Aeternum transforms passive esports fans into **active stakeholders**”

- Real ownership through tokenized team assets
- Transparent prediction markets on Solana
- Direct fan-to-team value exchange
- Democratized esports participation

**Join us in building the future
of esports engagement**
